

DID YOU KNOW THAT SUCAFINA CONTRIBUTES TO 13 OUT OF THE 17 UNITED NATIONS SUSTAINABLE DEVELOPMENT GOALS?

In 2015, 195 nations agreed with the United Nations that they could change the world for the better. This will be accomplished by bringing together governments, businesses, media, institutions of higher education, and local NGOs to improve people's lives by the year 2030. Of the 17 Sustainable Development Goals (SDGs) that were defined at the time, below are the 13 SDGs on which Sucafina and its partners can have an impact within the coffee supply chain:

ELIMINATE POVERTY

- By pursuing farmers' prosperity, productivity growth, and improving access to finance, which increases the capacity of farmers to grow their businesses.
- By improving traceability and moving towards a more equitable distribution of coffee income throughout the value chain.

ERASE HUNGER

- By opening discount retail stores, we are improving farmers living income in our CWS (Rwanda, Burundi).
- By providing farmers with seeds for Food Security during the COVID-19 crisis in East Africa.

PROVIDE QUALITY EDUCATION

- By improving farmers' skills on Agricultural Practices, technology, business management, etc.
- By improving school classes in Rwanda, and increasing the access to education.

ENFORCE GENDER EQUALITY

- By working on women empowerment in Burundi and creating women's cooperatives in Rwanda.
- By training households as a whole and including women in the businesses for increased representation of women within the coffee value chain.
- By sourcing Women's coffee in Peru and Colombia, above market price.

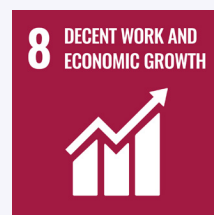

IMPROVE CLEAN WATER AND SANITATION

- By adopting water conservation practices, in terms of quality and quantity, at our coffee washing stations to improve the water use efficiency, but also by improving wastewater treatment.

ENSURE ACCESS TO AFFORDABLE, RELIABLE, SUSTAINABLE ENERGY FOR ALL

- By increasing energy efficiency and adopting renewable energy in some of our mills in East Africa.

CREATE DECENT WORK AND ECONOMIC GROWTH

- By increasing the adoption of improved labor practices on farms (wage/living income, workers' rights, Health & Safety).

INCREASE INDUSTRY, INNOVATION, AND INFRASTRUCTURE

- By focusing on innovation to boost data collection and reliability, increasing the number of farms covered by a mobile network, and allowing them to communicate and access information more easily.

REDUCE INEQUALITY

- By growing more prosperous and resilient farmers with our "Farmer Hub" initiative, and pursuing Shared Value.

INFLUENCE RESPONSIBLE CONSUMPTION AND PRODUCTION

- By promoting climate-smart agricultural techniques, improving farmers' resilience and profitability, increasing purchases of sustainable coffee, and ensuring premium prices received by producers.

ORGANIZE CLIMATE ACTION

- By measuring our greenhouse gas emissions in our supply chain in Rwanda and in some of our offices, as well as training farmers on climate-smart practices.

ADVANCE LIFE ON LAND

- By monitoring the land use and adopting soil conservation practices.

BUILD PARTNERSHIPS FOR THE GOALS

- By collaborating with so many partners in the private and public sectors.
